

Demystifying UX Research

ICG session, 3rd October 2023

Deborah Simmons, Camino insight

What we'll cover in this session

1. The state of UX Research
2. UXR Vs. MR – where is the overlap?
3. The digital product lifecycle (Design Thinking)
4. Mastering the language of UX
5. Best practice – a few tips
6. How to make useful UX recommendations

1. The state of UX Research – a slow start but heading in the right direction

Newer discipline

Sometimes undervalued

Often retrofitted

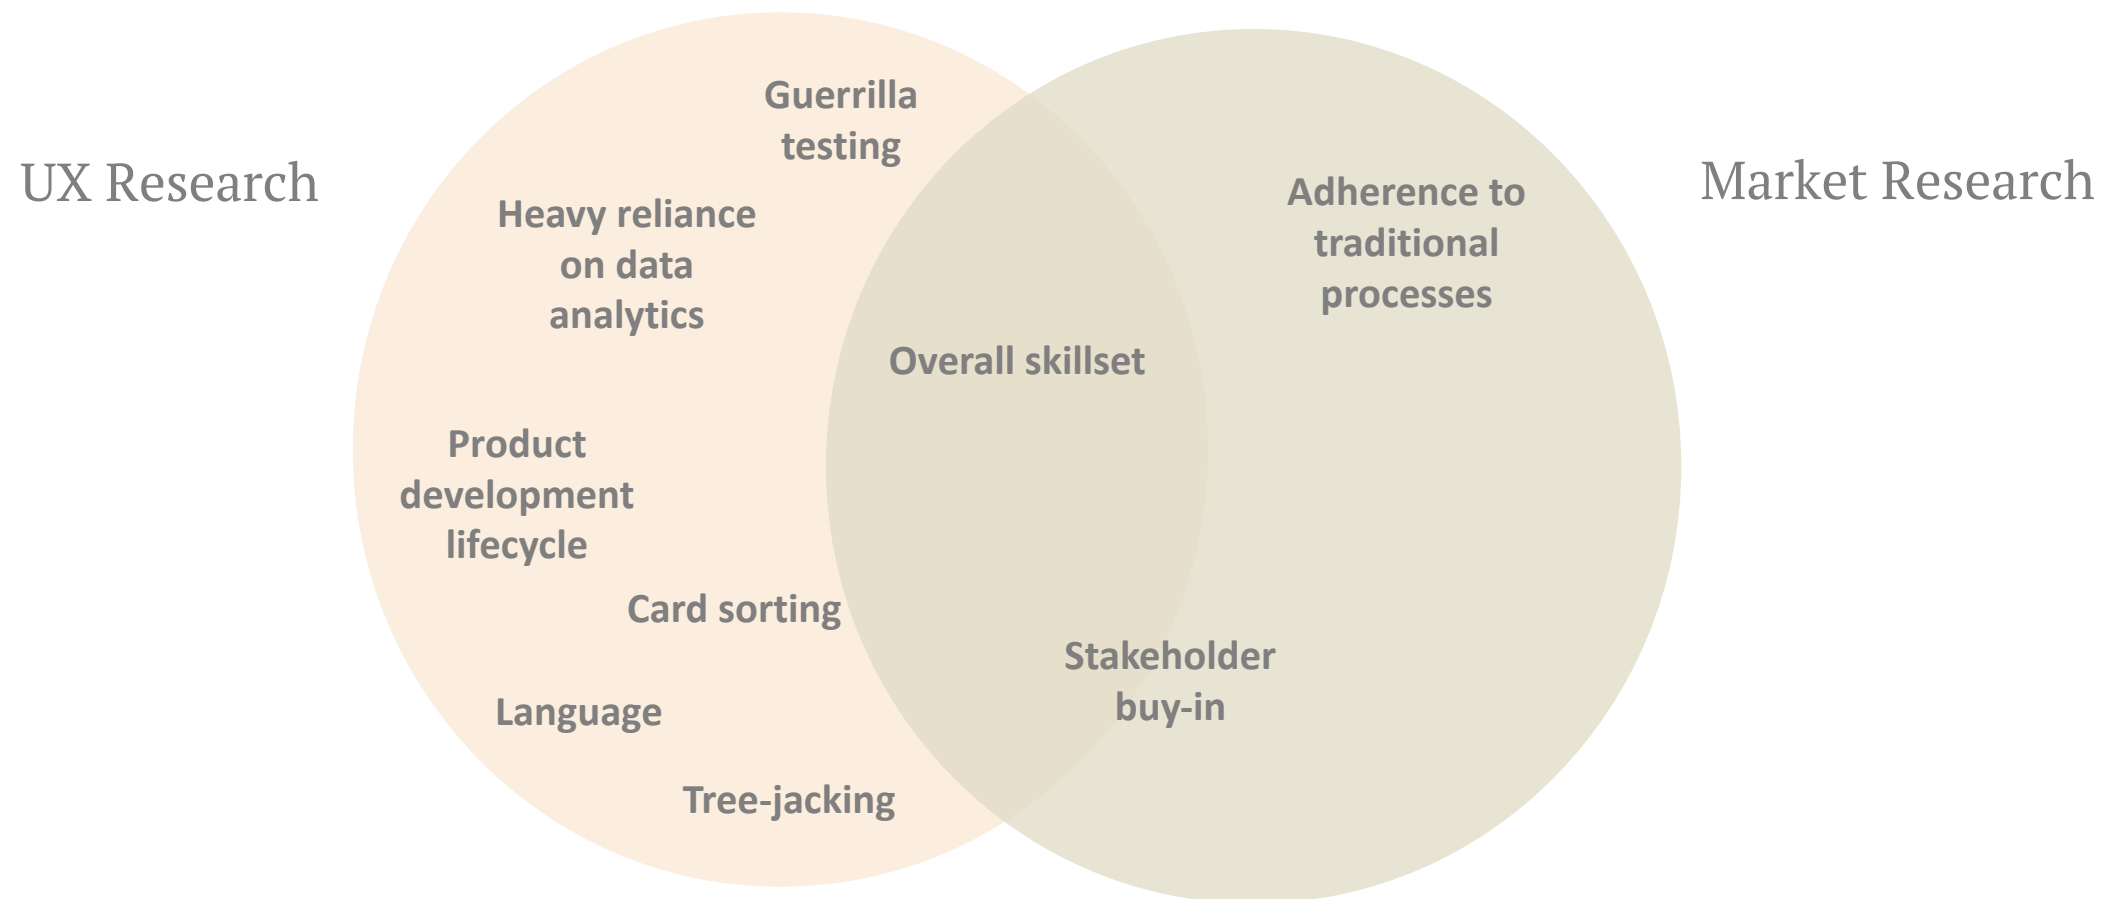

Gaining traction

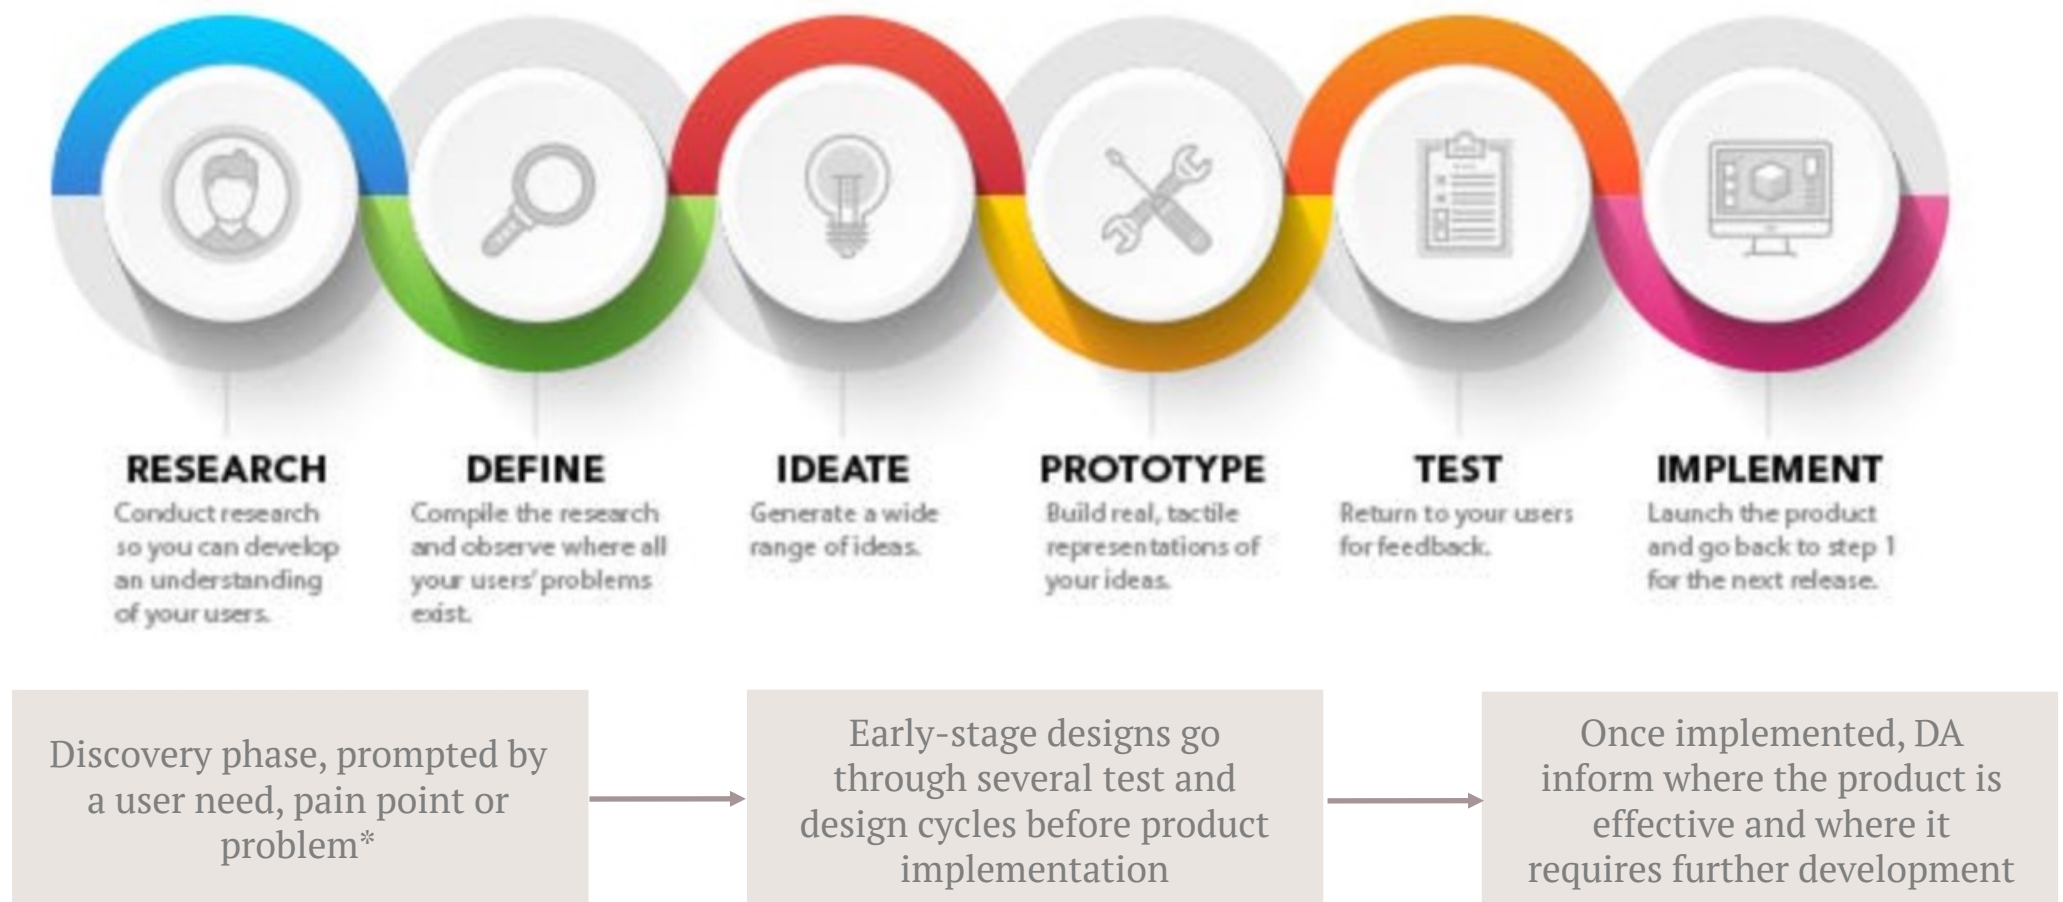

More permanent roles

2. UXR Vs. MR – where is the overlap?

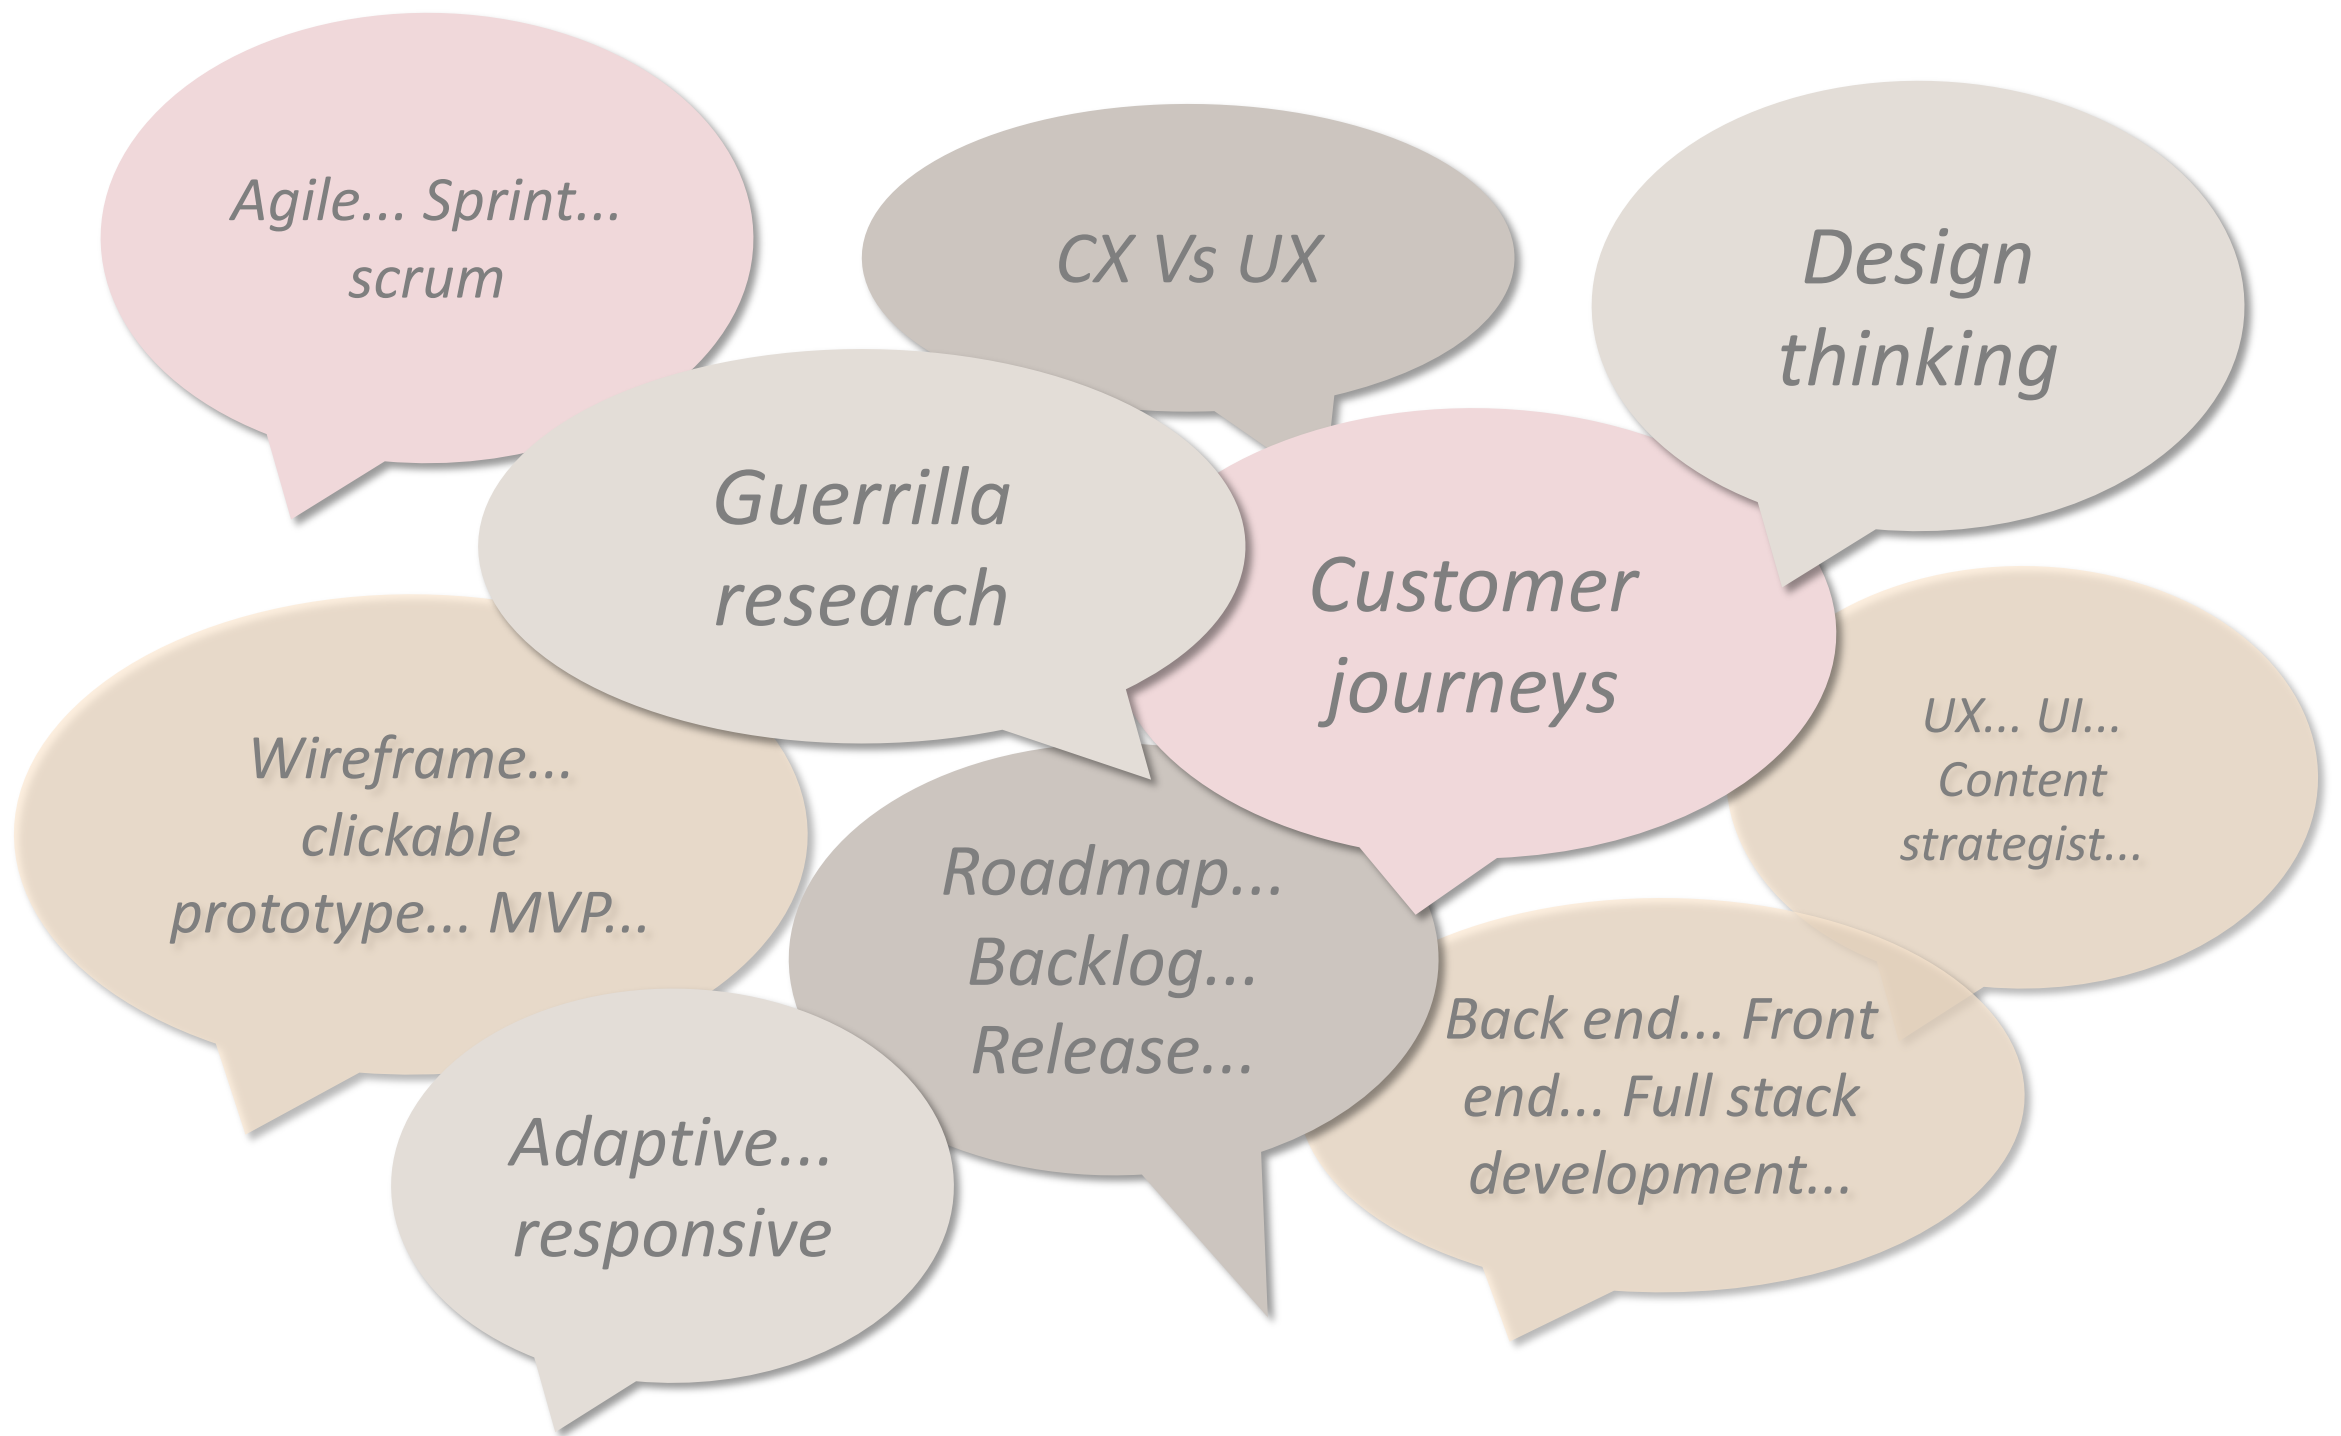

3. The product development lifecycle

The product development lifecycle is iterative; after implementation, research begins again to inform the next release, and so it continues... This is referred to as *'design thinking'*

*Problems arise when the product design lifecycle is triggered by a design idea rather than a user need, then built and 'validated' rather than tested. This can result in a product being implemented that is of no real use to the user

4. Mastering the language of UX

5. Best Practice – some tips

Be the Voice of the Consumer in a world where the consumer is rarely heard

Involve stakeholders from the start to encourage engagement and buy-in

Get design teams on-board and fully briefed as they have the power to affect change

Take a soft stance on research approach (at first)

Test on multiple devices and operating systems where relevant

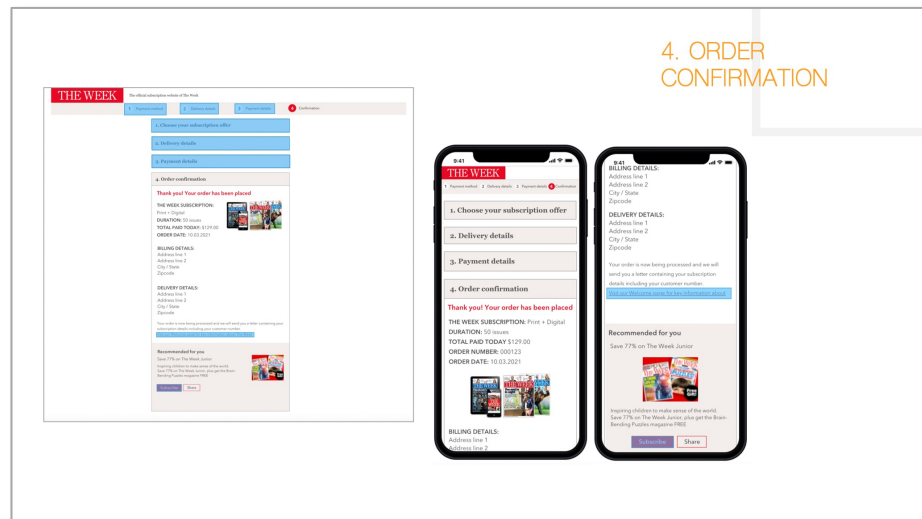

Record screens and faces for optimal observation

Use SUS if tracking enhancements over multiple dips (build up to a robust sample over time)

6. How to make useful UX recommendations

1. Recommendations aligned with roadmap / backlog
2. Strategic recommendations & low-hanging fruit
3. Feedback supported by visual aids
4. Adopt language of the design team

UK LANDING PAGE (P12)

The 'about' section of the landing page works well to engage and inform readers who are unfamiliar with The Week or are coming back to it after a break, however, the inability to see the pages in detail leaves users wanting

- Content received positively by newcomers and lapsed readers who are coming back to the publication and want a refresher
- DPS spreads are too small to offer any real value beyond visual engagement – users want to click on them to expand or take them through to another window where they can read sample content and see formats for different sections
- Stay informed, Save time, Entertain yourself* – are all key messages, but the font is very small – especially on mobile version
- Users love How *The Week covers the news* for its overview of the different types of content, but same feedback on size of page images
- Images and font on mobile version are tiny – practically unreadable
- Multiple sources, expertly edited together* is a real selling point and the main one that draws readers to The Week
- When users are able to read the different sources highlighted in red, they feel this detail adds value

The diagram shows a grid of content types under 'What's inside The Week?' and a detailed flowchart under 'How The Week covers the news'. The flowchart includes categories like 'Talkback pieces', 'Analysis', 'Opinion', 'Features', 'Investigative journalism', 'Reportage', 'Photojournalism', 'Video', 'Podcasts', and 'Audio'. A red box highlights 'Multiple sources, expertly edited together' in both sections.

The mobile app screenshot shows the 'How The Week covers the news' section with a grid of small images and text. A red box highlights the 'Multiple sources, expertly edited together' text.

"I'd like to be able to click on it and see what's in there – almost as a teaser for me to decide what it was I'd want to see first... I'd want to click on 'What's inside The Week' and for it to give me a summary of what's included."
